

# Welcome to Union Island

As you explore, you are entering the home of the Pink Rhino Iguana (*Iguana insularis*), the Union Island Gecko (*Gonatodes daudini*), the Diamond Back Tarantula (*Tapinauchenius sanctivincenti*), and the Common Scorpion (*Tityus pictus*).

Together, these remarkable species highlight the island's rich biodiversity and the importance of conserving its forests for future generations.

## Chatham Bay Forest Reserve

Home to the Chatham Bay Forest Reserve, one of Saint Vincent and the Grenadines' most unique natural treasures. This protected forest provides vital habitat for an extraordinary collection of wildlife found nowhere else, or in very few places, on Earth.

A rare glimpse of the Union Island Gecko, *Gonatodes daudini*, a tiny island specialist found in the forests of Union Island. Its vivid markings and delicate form reflect the extraordinary biodiversity protected by the Chatham Bay Forest Reserve. Every encounter is a reminder that even the smallest species deserve our care and protection.

*Protect. Respect.  
Preserve.*
